SUMMARY

Full-stack developer skilled in Java, Spring Boot, React, MySQL, and cloud technologies with hands-on experience building scalable backend systems, workflow automation platforms, and AI-powered applications. Experienced in REST API development, database integration, Docker-based deployment, and modern software engineering practices.

EDUCATION

B.Tech in Computer Science (AI & DS) , MIT World Peace University	Aug 2023 - Jun 2026
Diploma in Computer Engineering , R. C. Patel Polytechnic	Jan 2020 - Jun 2023
SSC , Ravsaheb Rupchand Vidyalaya	Mar 2020

SKILLS

Languages	Java, Python, C/C++, JavaScript, PHP, HTML5, CSS3
Frameworks	Spring Boot, React, Bootstrap, Flask, Hibernate/JPA
Tools	Git, GitHub, SonarQube, Camunda BPM, Docker, AWS
Database	MySQL, MongoDB
Concepts	REST APIs, Microservices, JWT Authentication
Coursework	Data Structures, Algorithms, Artificial Intelligence, Software Testing, Computer Networks, Natural Language Processing

EXPERIENCE

Backend Intern — Ebix Technologies Private Limited *June 2025 – December 2025*

- Built and debugged RESTful APIs and database integrations using Java and Spring Boot.
- Delivered full-stack features by seamlessly integrating backend services with React front-ends.

Web Development Intern — Sumago Infotech *June 2022 – Aug 2022*

- Developed and tested responsive web applications using HTML, CSS, JavaScript, and Bootstrap.
- Assisted in building and maintaining websites with focus on performance and user experience.

PUBLICATIONS

A Hybrid CNN-GNN Framework with Automated SAM Refinement for Accurate Brain Tumor Segmentation in Multi-Parametric MRI *2026*

PROJECTS

End-to-End Loan Processing and Approval System *2025*

- Built a full-stack loan processing platform using React, Spring Boot, and MySQL integrated with Camunda BPM workflows.
- Implemented BPMN-based approval routing and containerized deployment using Docker Compose.

Smart Traffic Violation Detection System *Mar 2025 – Apr 2025*

- Developed a real-time AI-powered traffic violation detection system using YOLOv8, OpenCV, and TensorFlow.
- Automated helmet, triple-seat, and wrong-way detection with Flask dashboard-based alert management.

Accessibility Improvement for Visually Impaired People *Dec 2024 – Jan 2025*

- Developed an OCR and TTS-based accessibility tool to convert PDFs and images into speech output.
- Improved accessibility for visually impaired users through customizable text-to-speech features.
